CREATED FOR DEMAND BUILT ON RECOMMENDATIONS

When a family member was experiencing regular break-ins, as a qualified electrician I decided to secure their home with a new burglar alarm system, CCTV and security lighting.

Till this day they are yet to experience another break-in, although the area still remains highly active for burglaries.

Word of mouth led to further security systems being installed across Cardiff.

Today Rhino Fire & Security Systems has grown to become a trusted fire and security company.

Nathan Siddall Company Director

Over the past few years Rhino Fire & Security Systems has provided security and fire safety systems across South Wales and surrounding areas.

With customers ranging from domestic right the way through to industrial premises and construction sites, we cater for it all.

We pride ourselves on supplying the latest technology at affordable prices.

WHO WE WORK WITH

We cater for everything right the way from a shed to a stadium. Here's a few examples of industries we work with.

Construction sites

Home owners

Festivals and concerts

Void and abandoned properties

Farming and agriculture

Highways and road maintenance

Utilities and infrastructure

Commercial and retail

Factories and industrial

Schools and colleges

INTRUDER ALARMS

Domestic The use of wireless alarm technology has significantly increased in recent years, leading to a wide range of wireless intruder alarm systems available in the market. This technology is convenient as it avoids disrupting the aesthetic of your home and can be installed more quickly. If wireless technology does not meet your needs, we offer a variety of other systems to suit your requirements. Typically, domestic intruder alarms and panels are installed to Grade 2, unless your insurance company requires a different grade.

Commercial The commercial security sector is known for its unique and challenging security demands that arise daily. We take great care from the design and installation of alarm panels to ongoing maintenance to ensure that the security system meets all of these demands. Our goal is to provide a versatile and flexible system that can adapt and expand to meet the changing needs of your company. We understand that a user-friendly system is also essential, particularly in a commercial setting where multiple personnel may need to use it regularly.

CCTV

Rhino Fire and Security Systems offers professional quality CCTV camera installation and maintenance services across South Wales and the nearby areas. We cater to both residential and commercial clients, providing an added layer of security to their premises. We take pride in our skilled and experienced team who not only install CCTV systems but also provide excellent customer service. We understand the importance of security and how it can protect valuable assets and act as a crime deterrent. Our services range from home owners to factories, and we work closely with our clients to deliver cost-effective CCTV systems that incorporate the latest technological advancements. Our offerings include standard analogue systems and full HD IP-based integrated systems that can serve a multitude of purposes. Our installation process is smooth and hassle-free, ensuring no business interference. Get in touch with us today for a free no-obligation consultation to learn more about our CCTV solutions for your home or commercial property.

FIRE

- **Fire Alarms**

Regularly servicing your fire alarm system can provide numerous benefits. Firstly, in most cases it is a legal requirement. Secondly, it can ensure that the system is functioning correctly and will alert you in the event of a fire, potentially saving lives and property.

Servicing can detect any potential issues or defects in the system, allowing them to be fixed before they become a major problem. This can save you money in the long run by preventing costly repairs or replacements. Additionally, regular servicing can extend the lifespan of your fire alarm system, ensuring it continues to protect your property and people for years to come.

- **Emergency lighting**

Often during a fire the first thing to happen is loss of power resulting in total darkness making it difficult to escape. We are able to offer a variety of domestic and commercial emergency lighting solutions ranging from simple bulb replacements with inbuilt batteries to permanent fixtures or handheld devices.

Escaping a building quickly in an emergency is crucial that's why we offer illumination route technology to provide a quick and easy route illumination during a blackout.

ACCESS CONTROL

Access Control / Intercom systems are a great way to protect your property. Mechanical or electrical locks keep your door locked until you release it, granting your visitors access.

See and speak to your visitors from your mobile phone or handset and allow them to leave video voicemails if you miss them.

Access control systems not only increase your properties security but can also help to restrict access within it.

Provide temporary visitor access to selected areas only and bar or remove users at any time.

RAPID DEPLOYMENT SECURITY SOLUTIONS

TOWERS

Providing high quality audio and video in remote or off grid locations our towers are the perfect solution to offer security and safety for Construction site security, Utility sector security, Vacant properties protection, Festivals & Events, Public safety & Crime prevention.

PODS

Our pods help to protect your property 24 hours a day. Built-in PIR motion detector cameras take 3-5 photos of trespassers and active a loud 113dB siren and strobe warning off any would-be intruders. Remotely arm or disarm your system via smart phone app and receive instant notifications of any alarm activations.

DRONES

Our team of skilled drone pilots can carry out all types of aerial tasks such as capturing stunning high quality images and videos of your existing property or recent new building project.

Undertaking essential maintenance checks or carrying out requested insurance inspections helping to avoid high access equipment costs and delays.

Speak with us today about your aerial requirements.

Services

Aerial Photography

Get high quality images and videos of your new project.

Maintenance checks

We can inspect large areas of infrastructure and utilities.

Insurance Inspections

We can carry out visual high level inspections for insurance companies avoiding costly access equipment and delays.
